Subject: Review of REACH and BPR status of Accoya®, Accoya Color® and Tricoya®

In May 2023 the experts of the Royal HaskoningDHV Chemicals Management Centre of Excellence have reviewed the status of products Accoya®, Accoya® Color and Tricoya® under the REACH regulation (REACH Regulation (EC) No 1907/2006), as well as the status under the Biocide regulation (BPR, Regulation (EU) 528/2012) for Accyss Technologies BV. This review was based on information provided on the production processes and the substances used.

Based on this information expert team concluded the following:

- under REACH the products Accoya®, Accoya® Color and Tricoya® do not require registration as they can be considered articles.
- even if the products were not articles, registration under REACH is not required as they are chemically considered as a modified natural polymer. Under REACH currently these polymers require no registration.
- Under the BPR the products are not biocides or biocidal products as their improved biological durability is only based on the physical action of being impervious to water and fungi.
