Accoya® wood’s superior dimensional stability (resistance to swelling and shrinkage) exceeds all commonly used species, including Teak, Sapele and Iroko.

Accoya® wood was the only wood that did not cup in this TRADA** trial on wooden cladding. Accoya® wood has been tested over prolonged periods in all types of weathering conditions - above ground, below ground and even in water - and has been proven to withstand even the toughest of external environments.

The Accoya® advantage:
- reduced swelling and risk of jamming in humid conditions
- better fitting windows and doors in all weathers
- less frequent coatings maintenance

* Accoya® wood is made using a modification process called acetylation
